Project Management Dashboard – Workflow Documentation

1. System Overview

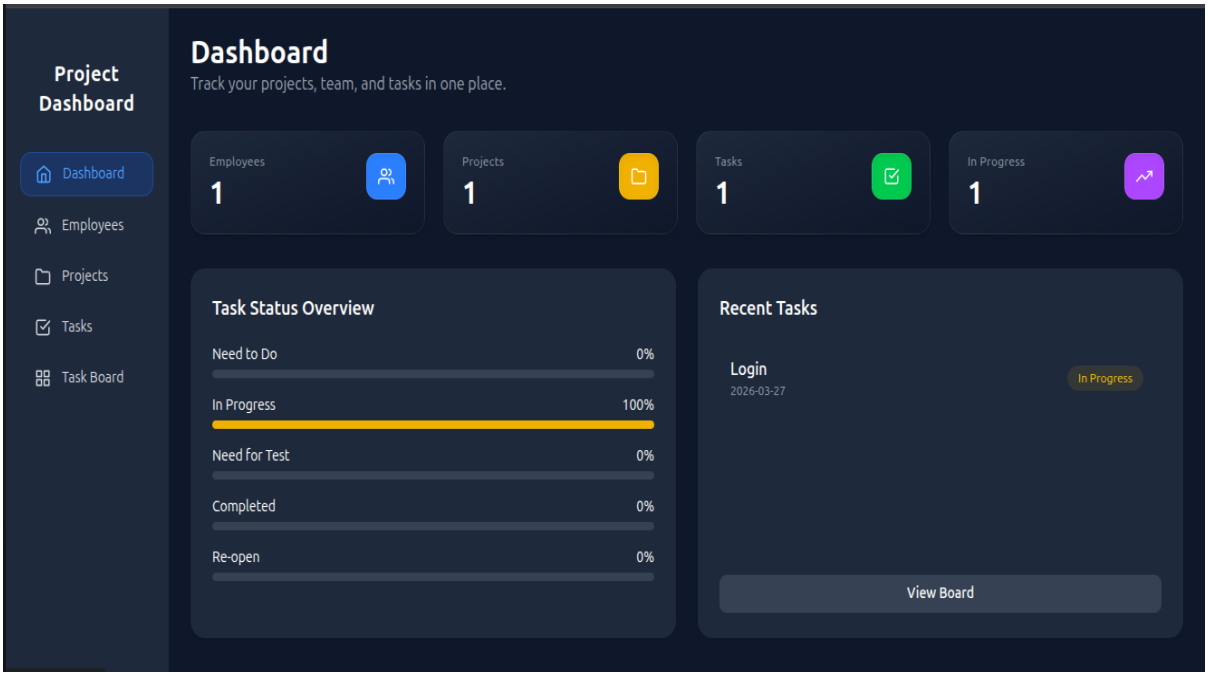
This project is a Project Management Dashboard built using React and Tailwind CSS. It allows users to manage employees, projects, and tasks with a visual workflow system.

2. Application Workflow

Employee → Assigned to Project → Project → Contains Tasks → Task → Moves across Task Board. Users can navigate by clicking cards: - Clicking a Project Card opens Project Details page - Clicking a Task Card opens Task Details page This creates a smooth drill-down navigation experience.

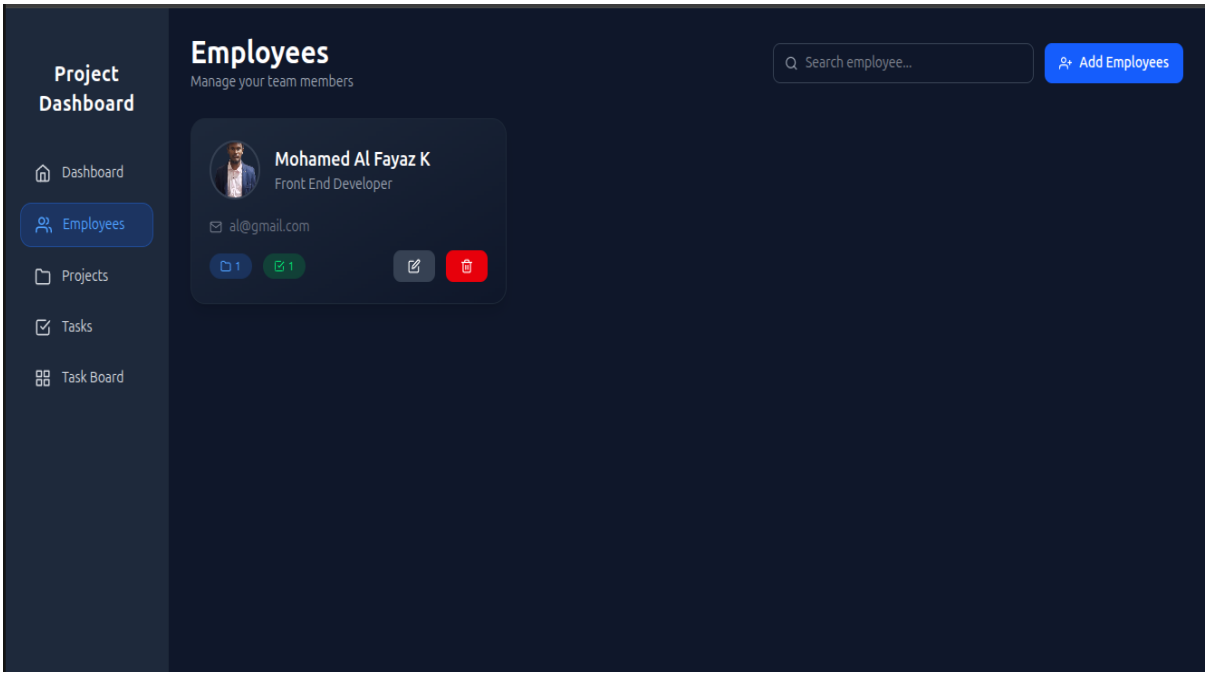
3. Dashboard

Displays system summary including employees, projects, tasks, and progress overview.



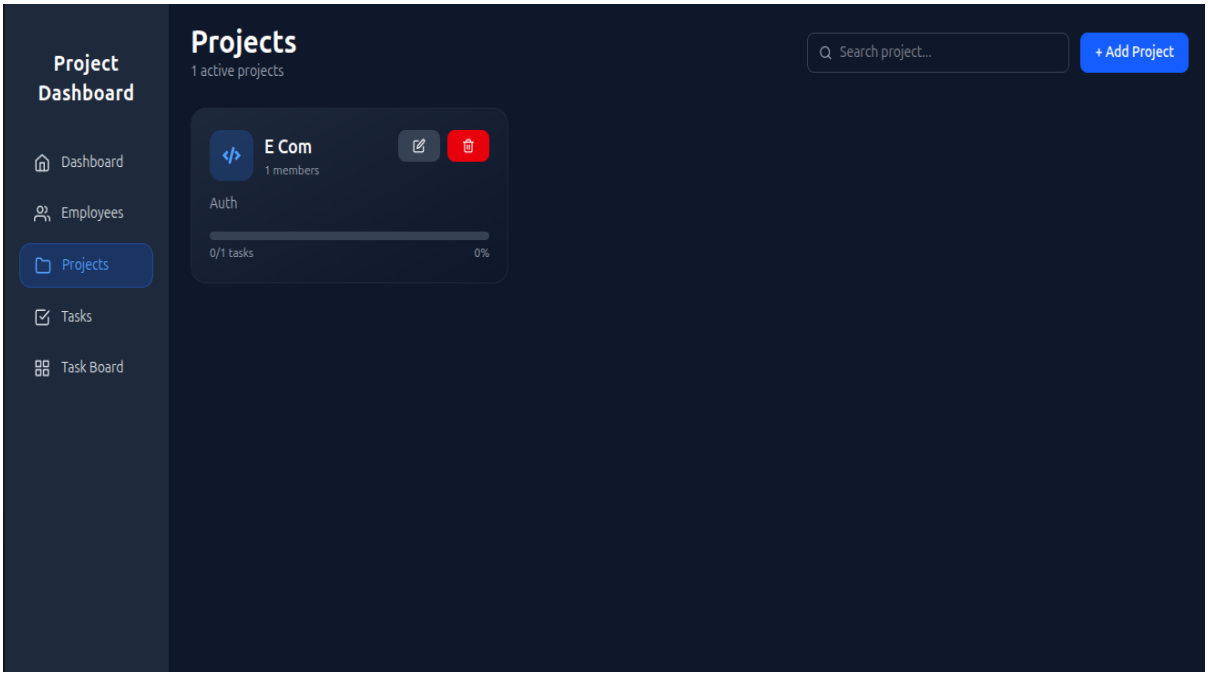
4. Employees Module

Users can create, edit, and delete employees. Each employee can be assigned to multiple projects and tasks.



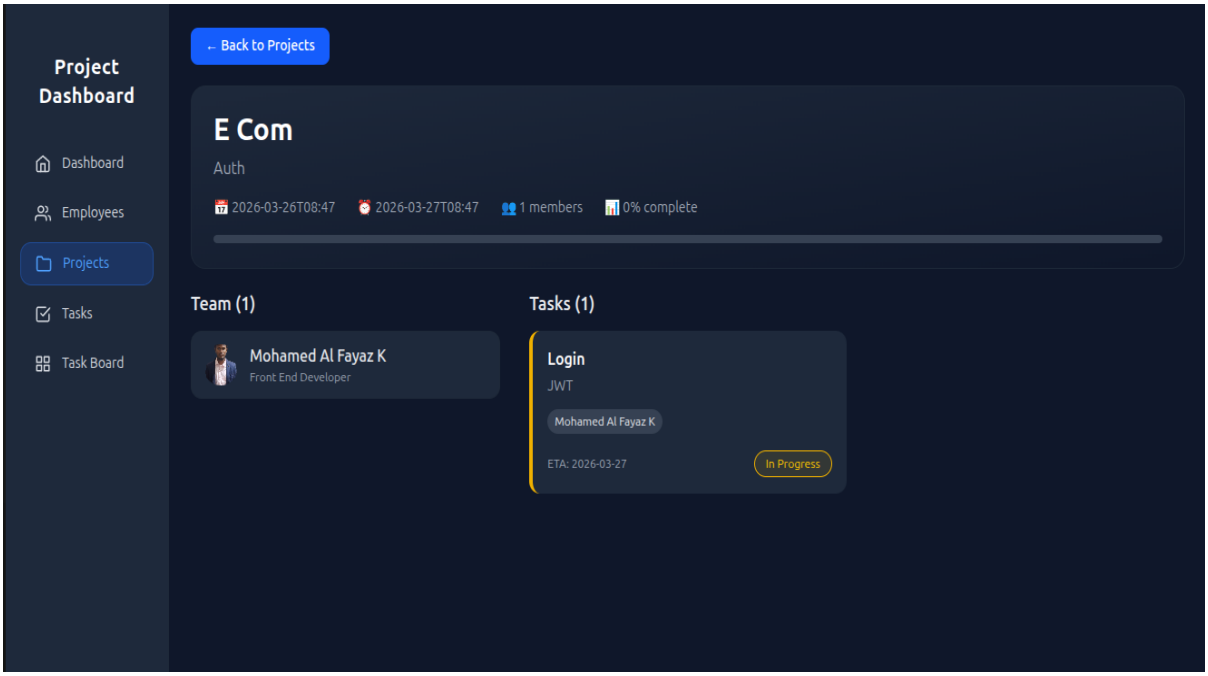
5. Projects Module

Projects act as containers for tasks. Users can assign employees and define timelines.



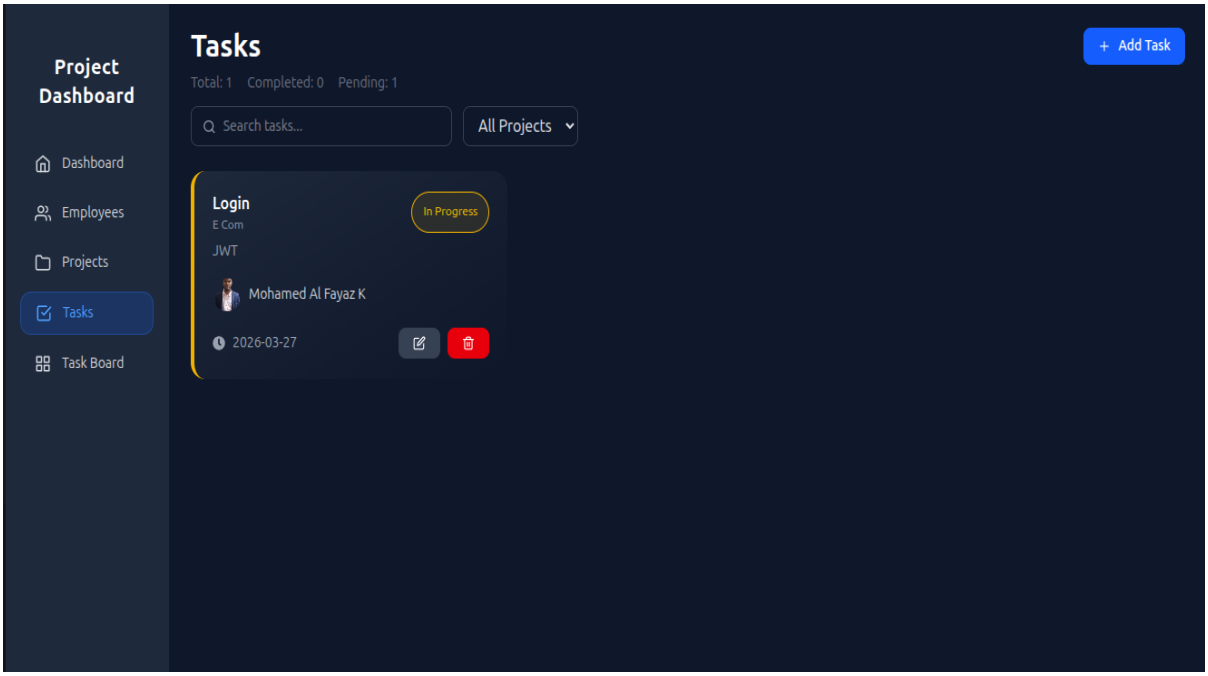
6. Project Details Page

Clicking a project card navigates to this page. It shows team members, tasks, and project progress.



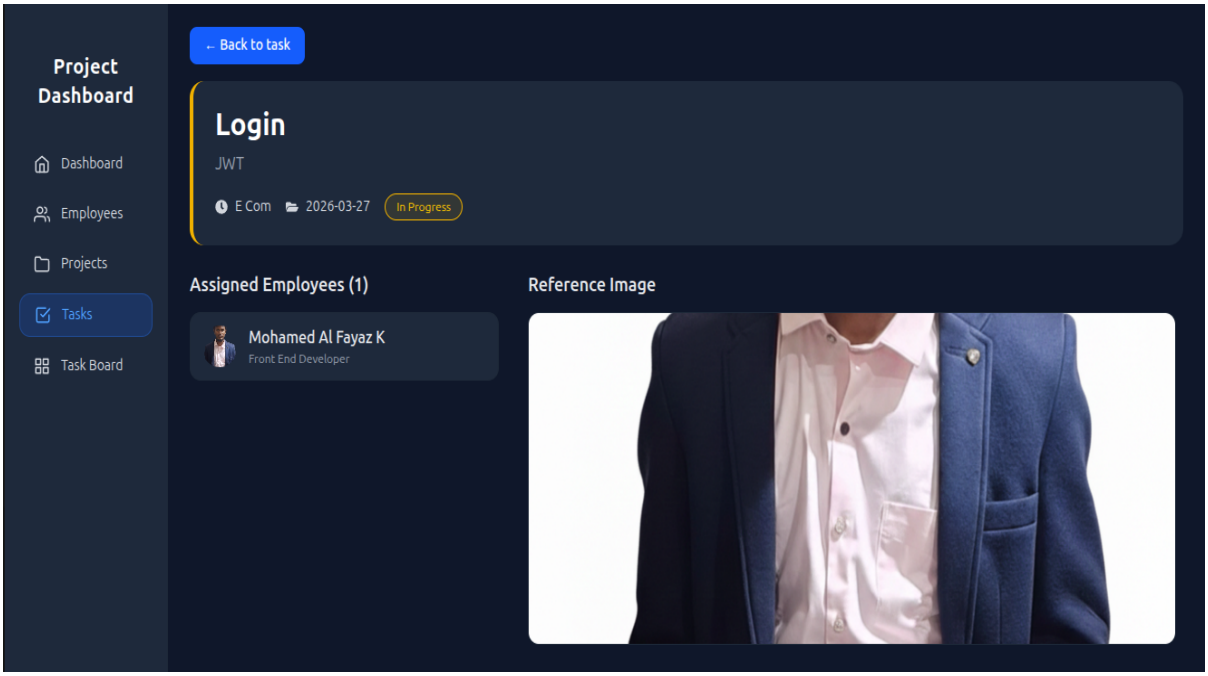
7. Tasks Module

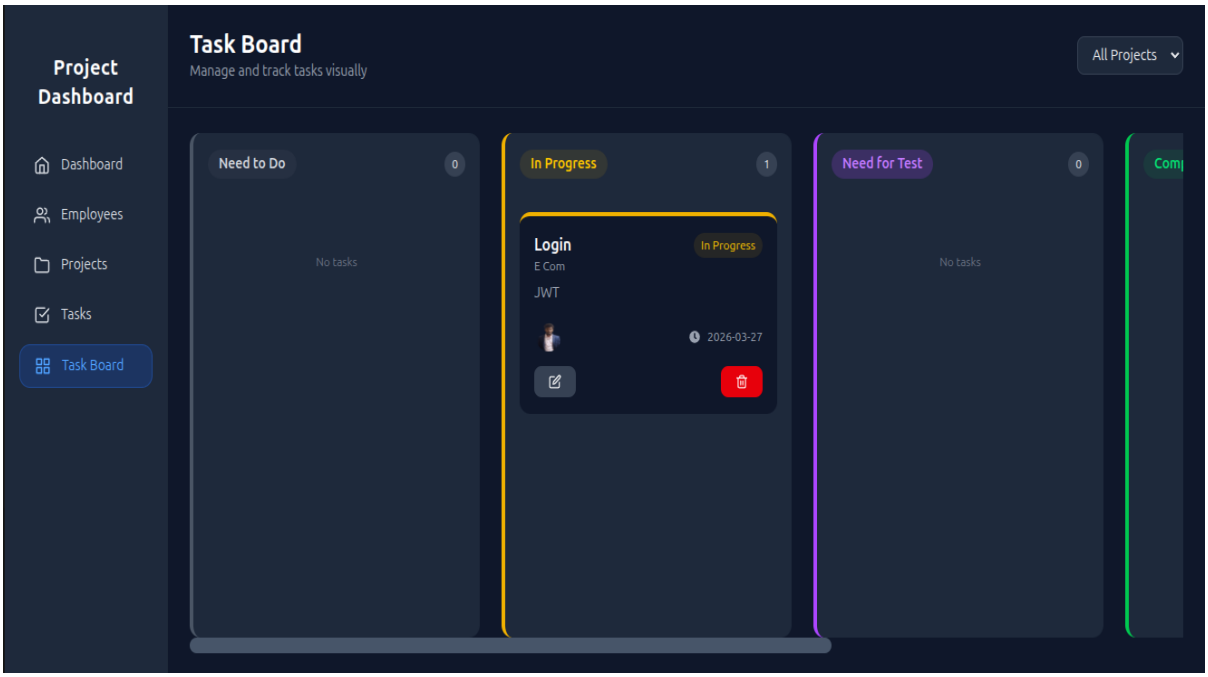
Tasks are created under projects and assigned to employees with deadlines and status.



8. Task Details Page

Clicking a task card opens detailed task view including assigned employees and reference image.



9. Task Board (Kanban Workflow)


Tasks move across stages: Need to Do → In Progress → Need for Test → Completed → Re-open. This provides visual tracking of task lifecycle.
